**1 in 6
hospitalisations are
kidney disease related.**

It's more than a wee problem.

Kidney disease is crippling our lives and hospitals. With no visible symptoms, diagnosis is often too late. You can lose 90% of kidney function without warning. It's a BIG problem.

In fact, 1.8 million Aussies don't know they have kidney disease. Diagnose and treat kidney disease early to slow progression by up to 15 years.

Kidney failure can strike without any symptoms.

It's more than a wee problem.

With no visible symptoms, diagnosis is often too late, turning lives upside down. You can lose 90% of kidney function without warning, so early detection is vital.

Check if you're one of the 3 in 4 Aussies at risk.
